passport™

A world of possibilities

Arrive at successful communication with Passport™

Built upon revolutionary technology, Passport™ lets you communicate successfully, even in challenging listening environments.

SmartFocus™ takes personalized hearing to a new level

SmartFocus lets you either focus in on the sounds in front of you, or experience a gradual increase in awareness of sounds all around you, depending on your listening needs. It does this through one simple control, which lets you adjust four powerful features: microphone response, speech enhancement, noise reduction and overall loudness. These features work together to make Passport superior in providing clear, inviting communication.

Passport™ gets to know you

Passport remembers your smartFocus and volume control adjustments. It automatically returns towards those settings when you are in similar listening situations, so you spend less time fine tuning your hearing instruments. Teaching Passport your preferences can happen even faster by pressing the learnNow™  button on your Smart Control remote any time you are happy with your hearing instrument settings.

Focus on what matters

SmartFocus is easily adjusted through a scroll wheel on the Smart Control remote or via a control located directly on your hearing instrument.

 Adjusting towards **Clarity** fine tunes to focus on the sound in front of you and works to pull clear, meaningful speech out of a noisy environment.

When might you adjust towards **Clarity**?

- Conversing with a friend at a busy restaurant
- Attending a lecture
- Watching television

 Adjusting towards **Comfort** reduces the annoyance and loudness of sounds, while providing awareness of sound all around you.

When might you adjust towards **Comfort**?

- Walking along a busy street
- Riding the train
- Waiting for the show to start at a busy theater

Purpose-driven features make a noticeable difference

Passport includes advanced technology that gives you the confidence to communicate like never before.

Personal: It listens to you

Passport can be personalized to your listening needs, thanks to smartFocus™. This powerful tool allows you to fine tune your hearing instruments in a whole new way, increasing your listening satisfaction no matter where you are.

Intelligent: It knows just what to do

Passport automatically matches your hearing instrument settings to your surroundings using an array of advanced, adaptive features. This process occurs in the background, with no action on your part. You simply enjoy the results.

Connected: It opens new doors

Passport supports the Unifi™ Wireless System, making it even easier to connect to the people, places and technologies in your life.

- Communication between hearing instruments means that your listening is always balanced across both ears
- Automatic connection to cellular phones and other Bluetooth® enabled devices means convenient, hands-free use
- Direct delivery of sound to both ears means better listening with fewer distractions

The Bluetooth trademarks are owned by Bluetooth SIG, Inc.

Comfort in an instant – All sounds are not created equal. Passport offers antiShock™ to instantly detect and reduce the discomfort of jarring noises, such as a door slamming or dishes clattering in a sink, while keeping the sound quality natural.

Say hello to convenient phone use –

When you bring the telephone up to your ear, Passport automatically switches to a telephone program. When you are finished using the phone, Passport automatically returns to your previous listening program.

The telephone program can be set up to work with Passport's wireless system so that both hearing instruments adjust when a telephone receiver is close to your ear. This makes it easier for you to focus on your conversation without being distracted by the other sounds around you.

No more annoying whistling – Passport uses a sophisticated feedback management system that works to provide comfortable listening without annoying and embarrassing whistling.

The choice is yours

Full feature set, packed tight

Passport introduces Moxi™ 13 Canal Receiver Technology (CRT) and Moda™ 13 slim tube – hearing instruments offering uncompromised features that give you the flexibility you need in a small, discreet size.

Wireless – Unifi™ Wireless System for simple connection to wireless features and devices

Fitting options – Choice of slim tube or CRT to meet your unique listening needs

Lever – Easy to locate and operate; can be set up as either a volume control or smartFocus

Push button – Can be set up as volume control or program change for maximum control

Your personal style is as unique as your hearing loss. So Passport offers a wide variety of styles, including new behind-the-ear (BTE) options, such as Shift™ and various in-the-ear (ITE) options. Along with colors that range from the traditional to sleek new aubergine and chrome.
